Dr. Trail and Dr. Miller are the area’s only general surgeons that operate at both Lewis & Clark Specialty Hospital in Yankton. Patients of Yankton Surgical Associates, P.C., are offered a choice of facilities when scheduling their surgeries.

Dr. Kynan Trail and Dr. Lisa Miller are the area’s only general surgeons that operate at both Avera Sacred Heart Hospital and Lewis & Clark Specialty Hospital in Yankton. Dr. Trail explains, “It’s one more way we can support and encourage our patients to take an active role in their medical treatment and care.”

“In essence, we’re empowering the patient and eliminating a stress for them at the same time,” adds Dr. Miller.

After all, when a patient is more comfortable with a surgical facility, they are more likely to have a positive experience through the whole surgical process, including healing. Dr. Trail and Dr. Miller also offer several in-office procedures and have special interests in laparoscopic surgery, endoscopy (colonoscopy and upper endoscopy), hernia surgery, gastroesophageal reflux disease, vascular surgery (veins), breast disorders, colon surgery, cancer surgery, gallbladder disease, treatment of hemorrhoids, skin cancer and other skin lesions.

Patients of Yankton Surgical Associates, P.C., offer a comprehensive ear, nose, and throat care team.

Dr. Wright, an Otolaryngologist, joins Dr. David Abbott, Otolaryngologist, in providing advanced surgical and in-office treatment of common ailments including sinus problems, ear infections, hearing difficulties, snoring, and balance disorders. In addition to Dr. Abbott and Dr. Wright, the practice has three Audiologists including Dr. Beth Beeman, Dr. Todd Farnham, and Dr. Erin Wolf.

The Audiologists offer a unique approach to hearing difficulties by using the area’s first double-sided hearing testing suite. The double-sided hearing testing suite enables the Audiologists to perform a complete, detailed, hearing evaluation in a controlled environment for more accurate test results.

The Audiologists also offer a unique solution for many hearing aid problems by helping the patient choose the most appropriate hearing aid instrument for them based on their hearing difficulties, not just using a “one size fits all” approach. Patients of Ear, Nose, & Throat Associates, P.C., speak highly of the treatment and service they receive.
